Technical Data Sheet

Designation **SAFETY SEALS FOR EXTINGUISHERS**

Brand **IMPARTE/IMPARTEX** **Ref. No.** **EXS10; EXS11**

General Description

Safety seals are devices used to guarantee the integrity and authenticity of products, equipment or documents. They act as protection against tampering, breaches and/or unauthorised access.

- Materials and design: seals are usually made of plastic, metal or another resistant material and have a locking mechanism that prevents removal without damaging the seal; the seal strip may contain small beads or notches to make intentional breaking easier;
- Tensile strength: the distinctive feature of seals is their limited tensile strength, meaning they can be broken easily when enough force is applied, allowing them to be opened quickly in an emergency;
- Application procedure: the seal is placed in the desired location (e.g. on an extinguisher valve). The strip is inserted into the locking mechanism and locked. Any attempt to remove it will break the seal.
- Verification and tracking: seals may carry serial numbers, barcodes and/or other unique identifiers, making it possible to track the seal's history and where it belongs, and to verify its authenticity.

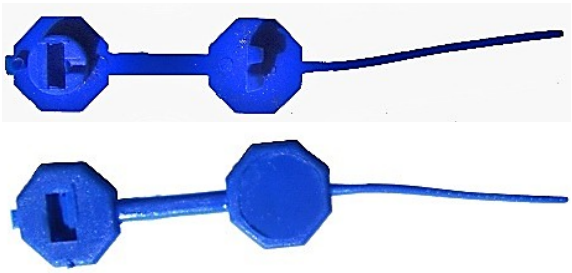

Features

Ref. EXS10:

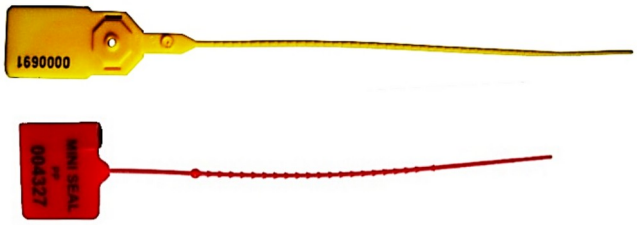

- High-strength, high-tensile polypropylene;
- Print area: 9mm diameter;
- Closure perimeter: 30mm;
- Length: 68mm;
- Colour: blue or red;

Ref. EXS11:

- High-strength, high-tensile polypropylene;
- Print area: 24x17mm;
- Closure perimeter: 50mm;
- Length: 223mm;
- Colour: yellow or red;

EXS10

EXS11

Additional Products

- Other models and colours of safety seals available on request;

Standards, certificates, marking and documentation

- In accordance with NP4413:2021.

As an innovative company, IMPARTE S.A. reserves the right to change product specifications, models and standard equipment without prior notice and without incurring any obligation.
