Technical Data Sheet

Designation 4” HYDRANT WITH FLANGED BASE

Brand IMPARTE/IMPARTEX **Ref. No.** MR09

General Description

Hydrants come in two types: 1) pillar hydrants or 2) wall or ground hydrant valves. A pillar hydrant is equipment installed on urban or industrial water supply networks that gives fire brigades and emergency teams quick access to a pressurised water source for firefighting. It is generally a structure that is buried or located beside public roads, connected to pipework and fitted with special valves and outlets for connecting hoses.
Used to supply drinking water, refill firefighting vehicles and fight fires effectively, they are a fundamental part of urban and industrial fire protection systems.
For help with frequently asked questions about this product, contact the Imparte S.A. technical/sales department.
